Eduardo Serrano Trenado

Backend Software Engineer

Madrid, Spain · serranotrenado.e@gmail.com · eduardoserranotrenado.com · linkedin.com/in/eduardo-serrano-trenado · github.com/Eduu115

SUMMARY

Backend software engineer in Madrid. I work with Java, Spring Boot and Kafka, and I run what I build. I like owning a system end to end: designing it, building it and keeping it healthy in production. Today that means SAP ABAP for a regulated bank at Deloitte, and my own projects on a server I run myself.

EXPERIENCE

Junior Delivery Analyst 02/2026 - now

Deloitte, Madrid. For the US arm of a global banking group.

- SAP ABAP development: backend programs, Web Dynpro and Fiori/UI5 apps.
- SAP GRC Process Control and Risk Management: internal controls and risk monitoring for a regulated bank.
- Data transformation and modelling in the SAP ecosystem (BW/4HANA).

Freelance Web Developer 08/2026 - now

Gubia Digital, my own studio. Part-time.

My part-time studio for small businesses and local shops. For a paying client I built and now run their production website and catalogue, end to end.

Web Developer Intern 04/2025 - 05/2025

Atos, Madrid

Eventbook: REST APIs with Java, Spring Boot, JPA and MySQL. Coordinated a team of 3 and owned the Git workflow.

PROJECTS

API Arena · apiarena.net 01/2026 - now

Sole architect and developer. Final project of my web development diploma. Awarded Matrícula de Honor, the highest distinction.

Automated grading for student-built REST APIs. Every submission is built, run in an isolated sandbox and scored with real HTTP tests and AI review.

- Idempotent consumers built on natural keys and unique constraints.
- Retries at 1, 2, 4 and 8 seconds, then a dead-letter topic per consumer group.
- Spring Security and JWT behind a rate-limited nginx gateway. TOTP 2FA and audit trail for admins. GDPR export and deletion.
- GitHub Actions runs end-to-end smoke tests and deploys to production. Prometheus, Grafana and Alertmanager watch it.
- Java 21, Spring Boot 3.5, Kafka, PostgreSQL 16, Redis 7, React 19. Docker, GitHub Actions, Prometheus, Grafana, Alertmanager.

saveToWin · savetowin.app AGPL-3.0

Open-source, multi-user personal finance app. Node (Hono), React and TypeScript, PostgreSQL. argon2 and JWT in httpOnly cookies. Money as integer cents, never floats.

My production server

One Ubuntu 24.04 machine that I set up and run myself. API Arena, saveToWin, Gubia's sites and this portfolio all live here. Tailscale and Cloudflare Tunnel. Postgres and Mongo to a NAS, 14-day retention, with alerts.

EDUCATION

BSc Computer Engineering 2026 - in progress, expected 2029

Universidad Europea, online

Higher Technician Diploma in Web Application Development 2024 - 2026

iFP, Madrid. Final grade 9.0/10, Matrícula de Honor for API Arena.

SKILLS

languages	Java, SQL, TypeScript, Python, SAP ABAP
backend	Spring Boot, Spring Security, JPA, Kafka, PostgreSQL, Redis, Node.js
ops	Docker, GitHub Actions, nginx, Prometheus, Grafana, Linux
testing	JUnit 5, Mockito
frontend	React, Angular, Tailwind
enterprise	SAP GRC, SAP BW/4HANA, Power BI

LANGUAGES

Spanish (native), English (B2, professional), French (basic)
